* Application on painted surfaces only.

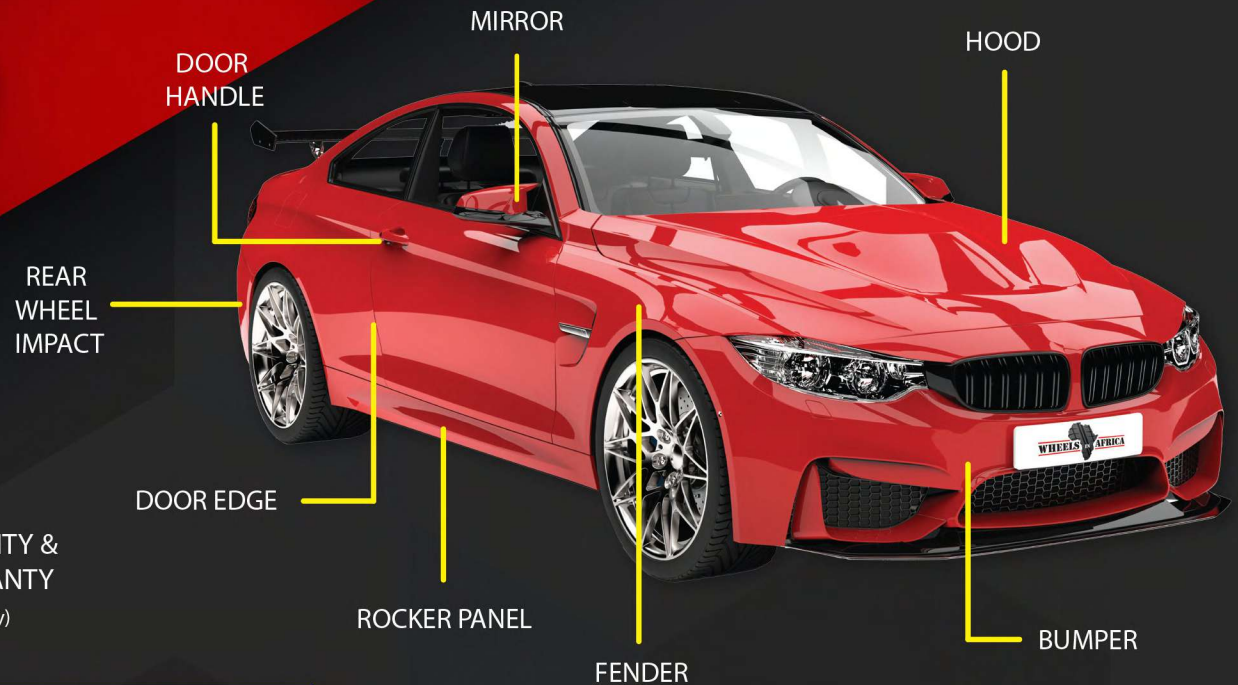

SELF HEALING COMPLETE PROTECTION

CUSTOM

- ✓ As per your requirements

CLEAR PPF - 10 YEAR WARRANTY &
COLOUR PPF - 5 YEAR WARRANTY
ON CRACKING (T's & C's Apply)

RIGHT CAR WRONG COLOUR? WE'VE GOT YOU COVERED

If you not only want to protect your car but give it a makeover with a new colour, we have a wide range of colours and finishes to choose from!

WHEELS IN **AFRICA**

WHAT IS PAINT PROTECTION FILM?

PPF is an ultra-thin polymer or polyurethane layer that acts as a transparent protective layer over a surface.

This "skin" like coat protects a car's clear coat and its paint from sustaining damage or weathering.

IS PPF WORTH IT?

Yes, it is! Installing PPF protects against:

- ✓ UV Rays
- ✓ Surface Scratches
- ✓ Tree Sap
- ✓ Hard Water Deposits, etc.
- ✓ Acid Rain
- ✓ Oxidation
- ✓ Bird Droppings

However, it is not effective against dents and other larger impacts. If you feel your vehicle does not face such extreme issues, you can install PPF.

HOW TO WASH A CAR WITH PPF

First, you need to choose the correct products for washing PPF: A pH-neutral soap or shampoo and soft cleaning tools like microfiber or sponge.

Then, fill two buckets with water; mix soap in one and leave the other clean. Remember, after every pass with your sponge, dip it in the clear water to rinse it before putting it back into the soapy water.

If you follow this method, you will not just prevent the PPF from contamination but keep the surface swirl-free. You can then dry your car with a microfibre or leave it to air dry. If you want to save time, you can also use a leaf blower. But no matter what you do, ensure the surface has no water spots.

PPF VS VINYL WRAP

When placed next to a run-of-the-mill roll of vinyl wrap, it becomes apparent that PPF is a far thinner, and far more lightweight alternative.

The perks of procuring it in either a clear or tinted shade are also unique unto PPF, as are its ability to offer superior surface protection and "self healing properties," both of which vinyl has in limited supply.

So while a vinyl wrap may offer some level of paint protection, it is typically installed for aesthetic or marketing purposes, because shipping trucks are basically rolling billboards, right? In contrast, a PPF is going to either be a matte-like armor, or if transparent, a see-thru shield that allows glossy painted surfaces to safely shine underneath.
